AKTYWNOŚĆ FIZYCZNA W PROCESIE USPRAWNIANIA OSÓB Z USZKODZENIEM RDZENIA KRĘGOWEGO W ODCINKU SZYJNYM

Warszawa 2007

Table of contents

List of abbreviations	17
PART I – anaerobic and aerobic performance, special fitness and psychological problems – scientific approach	19
1. Introduction – traumatic spinal cord injury in the cervical segments: definition, epidemiology, functional limitations, treatment and rehabilitation results	21
2. Influence of physical activity on anaerobic performance in individuals with quadriplegia	27
2.1. Anaerobic performance of individuals with quadriplegia	27
2.2. Importance of anaerobic performance in everyday life and in sport activity of individuals with quadriplegia	29
2.3. Factors determining the anaerobic performance of individuals with quadriplegia	30
2.4. Evaluation methods of upper limb anaerobic performance of individuals with quadriplegia under laboratory conditions	31
2.5. Evaluation methods of upper limb anaerobic performance of individuals with quadriplegia under field conditions	34
2.6. Research aims and questions	36
2.7. Material and methods	37
2.7.1. Characteristic of examined groups	38
2.7.1.1. Characteristic of active and sedentary men with traumatic quadriplegia participating in upper limb anaerobic performance test conducted under laboratory conditions in 2003	39
2.7.1.2. Characteristic of active and sedentary men with traumatic quadriplegia participating in upper limb anaerobic performance test conducted under laboratory conditions in 2002 and 2004	40

2.7.1.3. Characteristic of active men with traumatic quadriplegia participating in upper limb anaerobic performance test conducted under field conditions	42
2.7.2. Additional measurements	43
2.7.3. Evaluation tests of upper limb anaerobic performance	43
2.7.3.1. Under laboratory conditions	43
2.7.3.2. Under field conditions	44
2.7.4. Statistical analysis	47
2.8. Results	48
2.8.1. Upper limb anaerobic performance under laboratory conditions	48
2.8.1.1. Upper limb anaerobic performance of active and sedentary men with traumatic quadriplegia examined in 2003 under laboratory conditions in the Wingate test	48
2.8.1.2. Upper limb anaerobic performance of active and sedentary men with traumatic quadriplegia examined in 2002 and 2004 under laboratory conditions in the Wingate test	50
2.8.1.3. Analysis of relationships between upper limb anaerobic performance in the Wingate test and general characteristic of men with traumatic quadriplegia examined in 2002, 2003 and 2004	52
2.8.2. Upper limb anaerobic performance and reliability of selected tests from the Beck Battery in active men with traumatic quadriplegia	54
2.8.3. Analysis of relationship between the Wingate test and selected tests from the Beck Battery in active men with traumatic quadriplegia	54
2.9. Discussion	55
2.10. Summary and conclusions	63
3. Physical activity influence on aerobic performance of individuals with quadriplegia	65
3.1. Aerobic performance of individuals with quadriplegia	65
3.2. Importance of aerobic performance in everyday life and in sport activity of individuals with quadriplegia	68
3.3. Factors determining the aerobic performance of individuals with quadriplegia	69
3.4. Evaluation methods of aerobic performance of individuals with quadriplegia	73

3.5. Research aim and questions	75
3.6. Material and methods	76
3.6.1. Characteristic of examined groups	76
3.6.1.1. Characteristic of active and sedentary men with traumatic quadriplegia participating in aerobic performance test in 2003	76
3.6.1.2. Characteristic of active and sedentary men with traumatic quadriplegia participating in aerobic performance tests in 2002 and 2004	77
3.6.2. Additional measurements	78
3.6.3. Evaluation tests of aerobic performance	78
3.6.4. Statistical analysis	79
3.7. Results	80
3.7.1. Aerobic performance of active and sedentary men with traumatic quadriplegia examined in 2003	80
3.7.2. Analysis of relationship between aerobic performance and general characteristic of men with traumatic quadriplegia examined in 2003	81
3.7.3. Aerobic performance of active men with traumatic quadriplegia examined in 2003 and 2004	82
3.8. Discussion and conclusions	83
4. Influence of sport activity on level and changes of special fitness in individuals with quadriplegia	85
4.1. Importance of wheelchair rugby in the process of improving the physical fitness and its influence on abilities of individuals with quadriplegia	85
4.2. Importance of classification in wheelchair rugby	86
4.3. Research aims and questions	87
4.4. Material and methods	88
4.4.1. Characteristic of examined groups	88
4.4.1.1. Characteristic of Polish and American (USA) wheelchair rugby players with traumatic quadriplegia	88
4.4.1.2. Characteristic of Polish wheelchair rugby players with traumatic quadriplegia	89
4.4.1.3. Characteristic of national team members	90
4.4.2. Additional measurements	90
4.4.3. Evaluation tests of special fitness	90
4.4.4. Statistical analysis	92
4.5. Results	93

4.5.1. Special fitness of Polish and American (USA) wheelchair rugby players with traumatic quadriplegia	93
4.5.2. Analysis of relationship between special fitness and classification in Polish wheelchair rugby players with traumatic quadriplegia	94
4.5.3. Special fitness of wheelchair rugby national team members with traumatic quadriplegia examined in 2002 and 2003	96
4.6. Discussion and conclusions	96
5. Influence of physical activity on the intensity level of psychosocial problems in individuals with quadriplegia	99
5.1. Sport activity and psychosocial aspects of health in individuals with quadriplegia	99
5.2. Participation in sport and intensity of psychosocial problems in individuals with quadriplegia	100
5.3. Research aims and questions	101
5.4. Material and methods	102
5.4.1. Characteristic of examined groups	102
5.4.2. Witkowski SCI Scale	103
5.4.3. Statistical analysis	103
5.5. Results	104
5.6. Discussion and conclusions	107
PART II – Active rehabilitation, recreation and sport – practical approach	109
6. Active rehabilitation (AR) system	111
6.1. Organization of AR in Poland and in the world	111
6.2. Methodology assumptions of active rehabilitation	114
7. Selected issues on sport of individuals with quadriplegia	119
7.1. Functional abilities and adaptations of sport training in individuals with quadriplegia	119
7.2. Specificity of selected sports for individuals with quadriplegia (regulations, classification, methodology)	128
7.2.1. Wheelchair rugby	128
7.2.2. Swimming	140
7.2.3. Archery	162
7.2.4. Table tennis	170
7.2.5. Boccia	176
7.2.6. Wheelchair curling	181
8. Final remarks	187

8.1. Implementations and practical recommendations relating to complex rehabilitation process of individuals with quadriplegia	190
8.2. Implementations and practical recommendations relating to sport for individuals with disabilities	191
9. References	192
10. Annexes	204
Summary	233
List of figures	237
List of tables	242
